Meteorological Department

Memorandum on the Rainfall of June and July and the Probable Amount during August and September 1958

1. WEATHER IN INDIA IN JUNE AND JULY

June—Abnormal delay in the onset of the monsoon over the country was the main feature of the weather during June 1958. As a consequence of the late arrival of the monsoon, the rainfall during the month was in moderate to large defect over most parts of the country.

The southwest monsoon advanced as a feeble current into the south Andaman Sea, the Bay of Bengal to the south of Lat. 10°N and into the Ceylon-Comorin areas as early as the 13th May. However, it receded from the Ceylon-Comorin area and the southwest Bay by the 16th and thereafter it remained confined to the south Andaman Sea and the adjoining southeast Bay till the end of May. It strengthened on the 2nd June and advanced into the north Andaman Sea and the whole of the southeast Bay by the 5th and into the northeast Bay by the 13th June.

A trough of low pressure formed in the east Arabian Sea off the Malabar-Kanara coasts on the 13th and in association with it the monsoon advanced into Kerala and south coastal Mysore on the 14th, about two weeks later than the normal time. On the next day, the monsoon extended into north coastal Mysore. The trough moved slowly northwards and concentrated into a land depression over west Saurashtra on the 20th morning. The depression weakened by the same evening and became unimportant by the 21st. In association with the northward movement of the trough and the formation of the depression, the monsoon advanced into the south Konkan and interior Mysore on the 19th, north Konkan on the 20th, Maharashtra, Telangana and south Saurashtra on the 21st and into Gujarat and north Saurashtra on the 22nd. The monsoon also extended into Vidarbha and south Madhya Pradesh on the 24th. The west coast experienced active monsoon conditions during the period 20th to 30th June when locally heavy to very heavy rain occurred there. The monsoon was vigorous in the Konkan from the 25th to 28th and in coastal Mysore from the 28th to 30th. Some noteworthy amounts of rainfall recorded were: Dahanu 21 cms. and Bassein (Konkan) 25 cms. on the 25th; Bombay (Santa Cruz) 23 cms. and Thana (Konkan) 39 cms. on the 26th; Harnai 25 cms. and Bombay (Colaba) 23 cms. on the 27th; Vengurla 33 cms. and Kozhikode 22 cms. on the 28th. According to press reports, the heavy rains and gales along the west coast led to the dislocation of rail, road and air traffic, disruption of telegraphic and telephonic communications and collapse of houses at several places.

The Bay branch of the monsoon advanced as a feeble current into Assam and Sub-Himalayan West Bengal on the 16th and did not make further progress for about a week. In association with a low pressure wave which moved westwards across the head of the Bay of Bengal, the monsoon advanced into Gangetic West Bengal, Chota Nagpur and Orissa as a feeble current on the 24th. With the movement of an upper air 'low' across north Madhya Pradesh and neighbourhood between the 26th and 28th, the Bay branch of the monsoon advanced further into east Bihar on the 26th, west Bihar on the 27th, north Madhya Pradesh and Uttar Pradesh on the 28th and east Rajasthan on the 29th.

The total rainfall for the month of June was in large excess in the Konkan, in slight excess in Sub-Himalayan West Bengal, coastal Mysore and Kerala and normal in the Bay Islands, Gujarat and south Mysore. It was in slight defect in Assam, in moderate defect in Chota Nagpur, Jammu and Kashmir, east Rajasthan, Madhya Pradesh, Saurashtra and Kutch, Maharashtra, Vidarbha, coastal Andhra Pradesh, Rayalaseema and north Mysore and in large defect in Gangetic West Bengal, Orissa, Bihar, Uttar Pradesh, the Punjab (I), west Rajasthan, Telangana and Madras State. Data for Himachal Pradesh and the Arabian Sea Islands are not available. Averaged over the plains of India, the rainfall during June was 32 per cent in defect.

July—Good activity of the monsoon leading to well distributed rainfall over large areas of the country was the chief feature of the weather in July. Strong monsoon conditions prevailed in Bombay State and Madhya Pradesh during the first half of the month and in the northern parts of the country during the latter half.

Under the influence of two westerly waves which moved in succession across the extreme north of the country, the monsoon extended into the Punjab (I) and Himachal Pradesh on the 4th and into Jammu and Kashmir on the 7th. During the first half of the month, both the branches of the monsoon were active in association with the formation and movement of three depressions, one from the Arabian Sea and two from the north Bay of Bengal. Widespread and locally heavy rain occurred in the Konkan and coastal Mysore almost throughout this period and in Gujarat, Saurashtra, Maharashtra and Madhya Pradesh on some of the days. Some noteworthy amounts of rainfall recorded during this period were: Idar 31 cms. on the 9th, Mahabaleshwar 30 cms., Bombay (Santacruz) and Dwarka 24 cms. each and Porbandar 23 cms. on the 11th. According to newspaper reports, the heavy rain and the accompanying squally weather caused dislocation of road and rail traffic and disruption of communications at a number of places.

An upper level trough which extended from the north Konkan to west Madhya Pradesh was responsible for vigorous monsoon conditions in and near the north Konkan on the 19th when Khandala recorded 52 cms. of rain and Lonavala and Mahabaleshwar 43 cms. and 38 cms. respectively.

By the middle of the month the axis of the monsoon trough began to shift northwards and remained well to the north of its normal position thereafter. As a consequence, there was an increase of rainfall in northeast India, Uttar Pradesh and the Punjab (I). The rainfall in west Uttar Pradesh and the Punjab (I) was particularly heavy on some of the days in association with the passage of westerly waves across the extreme north of the country. New Delhi recorded 27 cms. on the 21st, Dharamsala 20 cms. on the 24th, 12 cms. on the 25th and 13 cms. on the 26th and Najibabad 19 cms. on the 31st.

The rainfall during the month was in large excess in Telangana, in moderate excess in east Rajasthan, Saurashtra and Kutch, Maharashtra and north Mysore and in slight excess in the Bay Islands, west Uttar Pradesh, the Punjab (I), west Madhya Pradesh, the Konkan and Rayalaseema. It was normal in Assam, Orissa, Chota Nagpur, east Madhya Pradesh, coastal Andhra Pradesh and coastal Mysore. The rainfall was in slight defect in West Bengal, Gujarat and Kerala, in moderate defect in Bihar, east Uttar Pradesh, Jammu and Kashmir, west Rajasthan, Vidarbha, Madras and south Mysore and in large defect in the Arabian Sea Islands. Averaged over the plains of India, the rainfall during the month was 4 per cent in excess. Data for Himachal Pradesh are not available.

June and July combined—The onset of the monsoon along the west coast and in northeast India was delayed by about two weeks. After the onset, however, the monsoon advanced steadily into the interior of the country and by the end of June, the entire country except the northwestern parts came under its sway. It advanced into the remaining parts also by the first week of July. During the first half of July, the monsoon was strong in the Bombay State and parts of Madhya Pradesh. Later in July, the activity of the monsoon was mainly confined to northeast India, Uttar Pradesh, the Punjab (I) and north Madhya Pradesh. Though there was well distributed rainfall in the country in the month of July, the total monsoon rainfall during June and July combined was still in defect in many parts of the country, notably in Gangetic West Bengal, Bihar and east Uttar Pradesh.

The total rainfall in the months of June and July was in moderate excess in the Konkan and Telangana, in slight excess in east Rajasthan and coastal Andhra Pradesh and normal in the Bay Islands, Assam, Sub-Himalayan West Bengal, west Uttar Pradesh, the Punjab (I), Madhya Pradesh, Saurashtra and Kutch, Maharashtra, Rayalaseema, north Mysore and Kerala. It was in slight defect in Orissa, Chota Nagpur, Gujarat and coastal and south Mysore, in moderate defect in Gangetic West Bengal, Bihar, east Uttar Pradesh, Jammu and Kashmir and Vidarbha and in large defect in west Rajasthan and Madras State. Data for Himachal Pradesh and the Arabian Sea Islands are not available.

Averaged over the plains of India, the combined rainfall during June and July was 9 per cent in defect.

The following table gives for each sub-division and for the Indian area as a whole the total rainfall during the period, its departure from normal and the percentage departure from normal.

Serial No.	Sub-division	Period, June and July		
		Actual	Departure from normal	Percentage departure from normal

2. CONDITIONS HAVING INFLUENCE ON THE RAINS OF AUGUST AND SEPTEMBER 1958

A foreshadowing of the monsoon rainfall of June to September was issued early in June. Recent data have been examined to see if any useful supplementary foreshadowing for the remainder of the season can now be given. The relevant data are the following:

Indian Pressure in July—In July pressure was generally below normal throughout the country. Averaged over the plains the pressure departure was -0.6 mb. in July.

Indian Ocean pressure in July—At Mauritius, pressure was in defect by 1.96 mb.

Java rain—The monthly rainfall departures from October 1957 to February 1958 were -68 per cent, -28 per cent, +13 per cent, -20 per cent and +10 per cent respectively.

South Rhodesia rain—Rainfall from October 1957 to April 1958 was in excess by 96.5 mm.

South American pressure—Pressure departures were as follows:—

	Buenos Aires	Cordoba	Santiago
June 1958 ..	-0.67 mb.	-2.13 mb.	+0.40 mb.
July 1958 ..	-1.46 mb.	-2.67 mb.	-0.93 mb.

Punjab Temperature Range—Departure of the Punjab Temperature Range $\frac{1}{2}$ (April+May) 1958 was +0.1°C.

Punjab (India) rivers and the Ganges River Discharges—Mean departure of the total river discharges during April and May 1958 was -253 (in 1,000 cusecs).

3. INFERENCES FROM THE DATA

In foreshadowing the August and September rainfall in the Peninsula (taken to consist of Bombay State, Madhya Pradesh (excluding Madhya Bharat, Bhopal and Vindhya Pradesh areas), Mysore North, Coastal Mysore (excluding South Kanara), and Telangana, the chief factors in the order of decreasing reliability as judged from the available data are Mauritius pressure, pressure distribution in India, Java rain and south Rhodesia rain. Of the factors Mauritius pressure and Java rain are very favourable, south Rhodesia rain is slightly unfavourable and the Indian pressure is unfavourable. The statistical analysis indicates that there is a four to one chance that the total rainfall of August and September 1958 in the Peninsula will be above 98 per cent of the normal.

For Northwest India (taken to consist of the Uttar Pradesh, the Punjab (I) (including Himachal Pradesh and Delhi) and Rajasthan, the factors used in the order of decreasing reliability, as judged by the available data are River Discharges, South American Pressure, south Rhodesia rain, Indian pressure and Punjab Temperature Range. This year the Punjab Temperature range is indifferent, south Rhodesia rain is moderately unfavourable, south American Pressure is very unfavourable, Indian pressure is slightly favourable and the River discharges are very favourable. There is a four to one chance that the August-September rainfall of this year in Northwest India will be below 113 per cent of the normal.

4. SUMMARY

The total rainfall of August and September 1958 is likely to be normal or in slight excess in the Peninsula and normal or in slight defect in Northwest India.

NEW DELHI,

The 19th August 1958.

New Delhi 3; the 22nd August 1958

No. E(1)03514—On return from leave granted to him in this Department Notification No. E(1)03514, dated the 23rd July 1958, Shri K. M. Easwaraswami resumed duty as officiating Assistant Meteorologist in the Regional Meteorological Centre, Madras, on the forenoon of the 4th August 1958.
